What I am supposed to do?

Worked for 15s >

You need to **write a reflection about three different labs from the 25 tasks in your Capstone**. The labs should cover distinct topics.

For each lab, explain:

1. **Which lab you selected:** Give its name and topic.
2. **What you learned:** Describe the skills, tools, and cybersecurity concepts you practiced. Include specific examples from your hands-on work.
3. **How you would use it professionally:** Explain how those skills could help in a job—for example, identifying vulnerabilities, investigating a security breach, or detecting threats.

A simple structure for your submission is:

- **Introduction:** Name your three selected labs.
- **Lab 1**: What you learned and how you would apply it.
- **Lab 2**: What you learned and how you would apply it.
- **Lab 3**: What you learned and how you would apply it.
- **Conclusion:** Briefly explain how these labs improved your cybersecurity understanding.

Due: October 24 at 11:59 p.m.
Submit: Through the assignment's text entry box or as a file upload.
Points: 1,000.
Length: The instructions do not specify a page or word count.

The examples—penetration testing, digital forensics, and AI/machine learning—are suggestions; you can choose other labs covering different topics.
